

Eaton 5130 UPS Honored with *INTERNET TELEPHONY*'s 12th Annual Product of the Year Award

March 3, 2010 ... For the second year in a row, Eaton is pleased to announce that it has been recognized by *INTERNET TELEPHONY* magazine for its innovative solutions in protecting telephony systems. The Eaton 5130 uninterruptible power systems (UPSs), which help information technology (IT) managers carry out green initiatives, has just been awarded the publication's 2009 Product of the Year Award. The 5130 power protection devices are specifically suited for protecting Voice over Internet Protocol (VoIP) and EDGE/3G/WiMAX wireless networking equipment against destructive power fluctuations and costly outages.

"We are proud to acknowledge the winning companies' greatest achievements in advancing VoIP and IP communication technologies for 2009," said Rich Tehrani, CEO of TMC. "These companies have shown us their devotion to quality and excellence while addressing real needs in the marketplace."

Hervé Tardy, vice president and general manager, Eaton Distributed Power Quality Division, said, "We're honored to once again receive this important recognition from *INTERNET TELEPHONY*. Our customers are especially impressed with the 5130's energy saving design, which allows the UPS to deliver clean, efficient power no matter the state of the incoming utility power at a price point that was once reserved for less-featured products."

Recognizing the most innovative products, *INTERNET TELEPHONY* honors the most deserving companies with this esteemed award. In making their final decisions, the editors selected the companies that have demonstrated the vision, leadership and thoroughness associated with the Product of the Year Award.
